

AN
ALMANACK

For the Year of Christian Account

1694.

And from the Creation of the World
5661.

But By *Keplers* Computation 5687.

Being the second after Leap-Year.

The Epact is 14. Golden Number 4.
and Dominical Letter G.

Containing Matters Necessary and
Useful, chiefly accommodated to the
Lat. of 40 Degrees, but may, without
sensible Error serve the Places adjacent
from *Newfound-Land* to the Cape of
Virginia.

By *Daniel Leeds*, Philomath.

A Motto, taught by the Son of Venus,
if to be born under Mercury disposed as to be a
scholar, and under Jupiter to be a statesman. We do not
Thanks unto them, but unto that Merciful God
that ordered our indifferent & uncertain
unto such benevolent Aspects.

Printed and Sold by *William Bradford*

Courteous and Ingenious Reader;

THou that has good Eyes mayst see that I oft change my Method, and I may well too, for Government is greater, and yet it has changed oftner here in *West-Jersey*, than I have altered the fashion of my Almanack.

*In the whole World all's fickle, nothing's Firm,
Laws, Cities, Empires, have but here their Term.*

One Reason why I make my Almanack less, is, that it may be cheap. I have left out Rules of Husbandry and Gardening, because the Directions in the last Years Almanack will serve this Year for those things: I love brevity, but naturally despise Tautology.

I have added a Cullomn of the Southing of the Moon for every Day, but take Notice, 'tis without respect to her Latitude, yet exact enough for common Use. Also, I have set down Sun rising & setting the 1st, 11th & 21th days of every Month, and also the South'ng of the seven Stars, which may be Useful to Planters, VVater men, &c. to know the Time of the Night &c.

But pray excuse me for omitting the Ephemerides, for I have thereby (like the *New-England Man*) well nigh fitted my Almanack to the Meridian of their Pates whose Poles are least elevated, and Longitude little or none at all.

And as for the several Errors in the last Years Almanack, the Printer is therefore to blame, and he owns it willingly; and when all men do the like, Times will mend.

Lastly, as to what I have spoken of the VVeather is in general, and respects all Kingdoms and Countrys, (for no other ways can we well do) Therefore if it happen not to be such VVeather in this particular spot of Ground, and yet be such in general, I hope you will not blame me for being so universally minded.

The bright shining Planet VENUS is our Evening Star this Year till the 3d of April, and from that time she is our Morning Star to the Year's end.

Note, That it is held extream perilous for the D to be in that Sign which ruleth the Member where the Vein is to be opened. So also it is held best to purge when the D is in a VVatery Sign, as ♋, ♊ or ♎. But an Oyntment or Plaister is best applyed when the D is in the same Sign that rules the Member to which it is applicable.

THE Laws of the Province of New-York will shortly be printed, whereto every one may have recourse to know the exact Time of Markets, Fairs, Courts, Exchequer Rates and Imposts upon Goods, &c. and also may omit them here.

XI. Month, Sebar, Cold January.

Cold it is, but what need they to care.

That have laid up a store in time of Year.

Those that neglect the Industry of the Ant,

To lay up store, no matter, let them want.

But those who'r weak and sick, and are not able,

I pity those, to such be charitable.

XII Month, *Adar*, Dirty *February*.

'Tis named from a Heathen Godd of Hell.
Which brings to mind what one long since did tell,
VVhen he observ'd the Christians, as we see,
far more Contentious than the Heathen be,
Says, Quarrels and Divisions for Religion
VVere Evils quite unknown unto the Heathen.
Mise not, for Heathen gods good fellows be,
'Tis the true God 's the God of Jealousie.

1. Month *Abis*, Blustering *March*.

At last the Iron Age comes blustering in
These Latter Times, and fills the VWorld with Sin.
But good men are content; for when they're old,
They'll change this Iron Age for one of Gold.
But Hypocrites run with the stream of Things,
They will keep Time what ever Dance begins.

II Month, Zif, Dripping April

And dripping, more or less, it does remain,
 E'er since (to cause Noah's Flood) it first did rain.
 Before which time the Earth (so Moses says)
 Was watered by a Mist, no other ways:
 The Rain-bow also proves it unto me,
 For without Clouds no Rain-bow could there be.

Like to fiery *July*, so is Man in his Prime,
 Stout, bold and firey, seeking high to climb;
 Let him that doth aspire view the large Skeys,
 And then upon the small Earth cast his Eyes,
 And hee'l despise the Glory of his Name,
 That's not so great to fill so small a frame.

III Month, 2nd, Mild October

About the seventh day Saturn is in fears,
Young Venus frowns, & makes him drop some tears,
Jove smiles at Hermes, while he lily fronts,
Close by his Masters fiery Charriot wheels.
All these Aspects spell'd and put together,
One thing they tell is Wind and Rainy Weather.

Month, Chislen, Blustering November.

After a Blustering season things appear
More mild and quiet at this time o th' year:
But I'll be silent, though not altogether,
For this Month will bring blustering stormy weather
Some Pious Men prefer'd, or much befriended,
By soveraign Might just as the Month is ended.

the Eclipses this Year 1664.

There will happen four Eclipses to the Inhabitants of this dark Star, call'd the Earth. Two of the Sun, and as many of the Moon.

The first will be of the Moon, the first day of January, about 7 in the morning, at the Moons setting, and therefore not all to be seen by us, but only the beginning of it.

The second is of the Sun the 12 day of June, at about 11 a Clock in the day, the Body of the Sun at London will be half darkened.

The third is an Eclipse of the Moon the 26 of June, about the time of Moon rising, and being but a small Eclipse, will scarce be seen by us.

The fourth and last is of the Sun, on the 6 day of December about Noon; but I have not leisure to make a Calculation of it, to tell you how great it will appear to us, nor indeed does the Courtisie of these Times deserve it at my hands; for I must tell you 'tis abundance of work to calculate a Suns Eclipse:

If you knew but how hard it is to Count

*A Suns Eclipse, your Noddes scarce would mount,
wherein a hundred things must first be found,*

[Before an Eclipse be raised from the Ground.

I might add a figure of the Position of the Heavens at the time of this Eclipse, and the Judgment of some Sons of Art thereon but shall here omit it, and present a Prophecy out of G. Wickers *Considering-Glass*, for you to pause upon in these Un-thinking Poppy-Turvery Times.

*There will, to thwart their Hopes, a New Star blaze
Within the West, that shall the Worlds Amaze;*

And, Influences through the Universe

So quickly, and prodigiously Disperse.

That, aided by concurring Conspirations,

It shall have some Effects upon most Nations.

And cause such Changes, as will make a stand

In those Attempts which they have now in hand.

But here I'll stop.

But before I conclude or make a Close,
 (In reference to our Antichristian Foes)
 I'll add this Corollary by the way,
 Whilst on his Horns the Beast is tossing Hay.
 Six Hundred Sixty Six draws on a pace,
 And not one day beyond that shall they pass,
 It is the Number of that MAN of SIN,
 Where to his Kingdom hath confined been,
 By him that cannot Lye; and long ago,
 To many, that Epocha I did shew,
 From whence his Reign begins; And by a Light
 (As I believe) which shines without deceit,
 It Numbers out his Reign as certainly
 As Women reckon the Nativiry
 O' Children in their Wombs, which hath success,
 Within a few days more or less.

To former Times this Mystery was dark,
 And lay a long while, cover'd like a spark
 In Ashes, lest perhaps what (at that time)
 Will comfort us, might have discourag'd them,
 Who lived then: For men joyce to hear
 The Day of their Deliverance is near:

But nothing save discomfort, could they gain
By knowing Tyranny so long should reign;
Yet now to us this Myst'ry doth presage,
That Babylon shall fall in this our Age.
Sev'n Numerals the Roman Empire had,
Whereby of Old they Computations made;
And in them was their Destiny fore-shown,
(Tho' to themselves perhaps it was unknown)
These placed singly, as they valued are,
Do truly (tho' mysteriously) declare (from
How long that Empire, with what sprang there-
Should last, when to the full height it should come,
For M. D. C. L. X. with V. and I.
Do number up, in Chronogramistry,
Years Sixteen Hundred Sixty Six; and that
Will be of Roman Tyrannies the Date.
No other Number, either more or less,
If none of these you double or displace,
Can be by them exprest. If you ask when
This Number did begin? I say, ev'n then
When Rome declin'd first from her high of Pride
Which was, when Jesus Christ was crucifide:
For, at that time her Glory did abate.
This Number therefore you must calculate
From or about the known time of Christs Passion,
Not from the first day of his Incarnation.
A silence (as it were) seem'd to have been
In Heaven, during th' Interval between
His Death and his Ascension, as if caus'd
By seeing that done, which had much amaz'd
The whole Creation, when that they did see
The Lord of Life hang dead upon a Tree,
Thus G. Withers.
